Functions of Matrices: Theory and Computation
Nicholas J. Higham

“This superb book is timely and is written with great attention paid to detail, particularly in its referencing of the literature. The book has a wonderful blend of theory and code (MATLAB®) so will be useful both to nonexperts and to experts in the field.”
— Alan Laub, Professor, University of California, Los Angeles

The only book devoted exclusively to matrix functions, this research monograph gives a thorough treatment of the theory of matrix functions and numerical methods for computing them. The author’s elegant presentation focuses on the equivalent definitions of $f(A)$ via the Jordan canonical form, polynomial interpolation, and the Cauchy integral formula, and features an emphasis on results of practical interest and an extensive collection of problems and solutions. It is also useful as a general reference in numerical linear algebra.

Stability and Stabilization of Time-Delay Systems: An Eigenvalue-Based Approach
Wim Michiels and Silviu-Iulian Niculescu
Advances in Design and Control 12

This monograph addresses the problem of stability analysis and the stabilization of dynamical systems subjected to time-delays. It presents a wide and self-contained panorama of analytical methods and computational algorithms using a unified eigenvalue-based approach illustrated by examples and applications.

Perturbation Bounds for Matrix Eigenvalues
Rajendra Bhatia
Classics in Applied Mathematics 53

This text contains a unified exposition of spectral variation inequalities for matrices. It provides a complete and self-contained collection of bounds for the distance between the eigenvalues of two matrices, which could be arbitrary or restricted to special classes. A good reference for researchers and students, it contains over 60 pages of new material.
