Shapes and Geometries: Metrics, Analysis, Differential Calculus, and Optimization, Second Edition
Michel C. Delfour and Jean-Paul Zolésio
This considerably enriched new edition provides a self-contained presentation of the mathematical foundations, constructions, and tools necessary for studying problems where the modeling, optimization, or control variable is the shape or the structure of a geometric object.

The Linear Sampling Method in Inverse Electromagnetic Scattering
Fioralba Cakoni, David Colton, and Peter Monk
The linear sampling method is the oldest and most developed of the qualitative methods in inverse scattering theory. It is based on solving a linear integral equation and then using the equation’s solution as an indicator function for the determination of the support of the scattering object. This book describes the linear sampling method for a variety of electromagnetic scattering problems.

Mark S. Gockenbach
Partial differential equations are essential for modeling many physical phenomena. This undergraduate textbook introduces students to the topic with a unique approach that emphasizes the modern finite element method alongside the classical method of Fourier’s analysis.

Nonlinear Waves in Integrable and Nonintegrable Systems
Jianke Yang
This groundbreaking book presents cutting-edge developments in the theory and experiments of nonlinear waves. Its comprehensive coverage of analytical and numerical methods for nonintegrable systems is the first of its kind.
2010 • xxvi + 430 pages • Softcover • ISBN 978-0-898717-05-1

Generalized Concavity
Mordecai Avriel, Walter E. Diewert, Siegfried Schaible, and Israel Zang
Originally published in 1988, this enduring text remains the most comprehensive book on generalized convexity and concavity. The authors present generalized concave functions in a unified framework, exploring them primarily from the domains of optimization and economics.
2010 • xvi + 332 pages • Softcover • ISBN 978-0-898718-96-6
List price $75.00 • SIAM Member Price $52.50 • Code CL63

Nonlinear Programming: Concepts, Algorithms, and Applications to Chemical Processes
Lorenz T. Biegler
This book addresses modern nonlinear programming (NLP) concepts and algorithms, especially as they apply to challenging applications in chemical process engineering. The author provides a firm grounding in fundamental NLP properties and algorithms and relates them to real-world problem classes in process optimization.
2010 • xvi +399 pages • Hardcover • ISBN 978-0-898717-02-0
List Price $85.00 • MOS/SIAM Member Price $59.50 • Code MO10

Modeling, Simulation, and Optimization of Supply Chains: A Continuous Approach
Ciro D’Apice, Simone Göttlich, Michael Herty, and Benedetto Piccoli
This book offers a state-of-the-art introduction to the mathematical theory of supply chain networks, focusing on those described by partial differential equations.
2010 • x + 206 pages • Softcover • ISBN 978-0-898717-00-6
